

# pantellos analytics

## Answering your questions about Marketplace activity

If you're a procurement manager, executive or decision maker who tracks and analyzes procurement, you may be asking questions like these about your company's Pantellos Marketplace activity:

- How much did we spend on computer hardware in the fourth quarter?
- How is our procurement spend ranked against other utilities participating with Pantellos?
- How much did we spend on wood poles in January?
- How is our purchasing activity distributed by supplier diversity group?
- How much have we saved or earned by using Pantellos Dynamic Services?

Pantellos Analytics can help you find the answers to these and many other questions.

## What is Analytics?

More than a simple reporting application, Analytics is a powerful Web-based tool to help you analyze and understand your Pantellos Marketplace activity.

Analytics allows you to track a wide range of numeric measures, including purchase value, number of purchase orders, ordered quantity and average purchase order value. You can then analyze these measures by date, supplier, diversity group, buying organization, product (UNSPSC) code and other categories.

You can also analyze your Pantellos Dynamic Services activity. Evaluate the number of auction events, the event transaction value, and dollars saved or earned — as distributed across auction type, date and product category.

## Online analysis for rapid decision making

Other reporting tools provide raw data. Analytics is different—it provides information in a form that supports effective decision making. Analytics instantly summarizes data at the level you specify, allowing you to draw immediate conclusions.

Various predefined views allow you to quickly see your Pantellos Marketplace activity from different angles. You can also customize data views for your specific needs. Customized views can be saved to a bookmark for later retrieval.

You can view Analytics information online in grid format, chart your data using a robust charting engine, print the data or export it to a spreadsheet.

## fast facts

- Track your purchase activity by buyer organization.
- Assess your relative ranking in the Marketplace.
- Measure participation with diversity suppliers.
- Evaluate purchasing patterns — who buys what and from which suppliers.
- Analyze your Pantellos Dynamic Services activity.
- Track your adoption of Pantellos Collaborative Agreements.
- Chart all information directly in Analytics using one of more than 80 different chart styles.
- Analyze information online or in a printed report, or export to a spreadsheet to share with others.

## features

- Secure Internet access to the Web-based Analytics tool
- Variety of predefined views to provide numerous perspectives on Marketplace activity
- Powerful drill-down and slice-and-dice capabilities (in most views)
- Ability to customize views for specific needs
- Ability to bookmark customized views for future reference
- Online viewing of information in grid format
- More than 80 charting options using a robust charting engine
- Capabilities for printing reports or exporting data to a spreadsheet

## powered by pantellos

Analytics is hosted and managed by Pantellos. Analytics was built by Pantellos for use by the Marketplace trading community.
